

### **Guidelines for documentation of project**

1. I have shared basic format of project documentation. You may enhance it in any way. The attached file shows the minimum requirements.
2. In the title page, you may insert any picture related to your project.
3. Any certificate and acknowledgement can be referred to from internet. No need to stick to the one given by me
4. Discuss the introduction to project in minimum 200 words.
5. Show the structure and data of mysql tables/binary files/csv files. You may write briefly about whatever out of three you have used in your project.
6. Do give header and footer as shown in format.
7. It is must to give page number too
8. Code is to be copied as text with proper indentation. It should not be in italics. Don't use screenshots of code( as done by some of you in practical file)
9. Capture output screens for all the options.
10. Outputs should be clearly visible and readable.
11. Guidelines for writing conclusion and future enhancements are already mentioned in the sample format.
12. Prints can be black and white or coloured...all your call.
13. Page borders must be there.
14. All the best. Submit your project report timely.

Feel free to talk to me in case of any confusion.

**God bless You all with health, happiness and success.**
